

ABSTRACT

A culture medium for filamentary fungi comprising at least one carbon source chosen from the group consisting of molasses, malt extract and sucrose and at least one organic
5 nitrogen source chosen from yeast extract and corn steep liquor is described; a method for producing filamentary fungi, in particular nematophagus fungi on an industrial scale, comprising the step of seeding conidia of such fungi in the aforementioned culture medium and maintaining such a
10 culture medium at a temperature of 23-30°C for a time of 5-10 days to determine the reproduction and growth of the fungi is also described.
